

By phone today, I managed to talk to a young woman in Wuhan who described to me the stress of not knowing what is really going on and what to believe.

TRANSLATION: We don't feel safe. We don't know how the virus is passed from one person to another. But we can't stay at home all the time, and we don't know when this will end. We don't know when we'll be able to return to normal life.

That's very stressful. There is some good news. These are patients who have recovered, leaving hospital today. But tonight, we learnt that the virus had killed this man Dr Li Wenliang, in early December this Brave Wuhan doctor had attempted to warn the authorities about the spread of a dangerous new virus. His warnings were ignored. Rupert Wingfield-Hayes, BBC News, in Hong Kong. Let's go live now to St Thomas' Hospital in London where the latest case in the UK is being dealt with, Hugh Pym our health editor is there. What's the latest there Hugh? Well, Hugh, the patient, a middle-aged man, was brought here this afternoon to the specialist infectious diseases treatment centre. He'd been taken ill in Brighton and was isolated at home before testing positive. Now, it's understood he travelled recently to the UK from Singapore, and health authorities have briefed that he didn't contract this virus in China. So, on the back of that they've extended their guidance to people coming into the UK. Up until today anyone coming in from China who developed symptoms was urged to self-isolate and call NHS 111. They've now extended that guidance to anyone coming in from some other Asian countries including Japan, Malaysia and Singapore. So, where does this leave us tonight? Well, the Chief Medical Officer for England, Chris Whitty, working with the UK's other chief medical officers, says this remains a serious problem for China but there are still only relatively few cases beyond that. If that remains the case, they say the NHS can cope with what's thrown at them. If the WHO change their guidance and it becomes a global pandemic, that could create serious pressure for the NHS. Thanks.
